project : Broadband Performance and Internet Measurements in Africa

Project Execution

Problem There is little published information on broadband/Internet performance in Africa. As a result, decision making by consumers, regulators and providers is difficult and not informed.	Solution Open data platform to document broadband performance and other Internet related information in the continent	Unique Value Proposition <ul style="list-style-type: none">• Better policy regulations, while ensuring better service delivery• Improved network performance by Internet Service Providers• Market transparency thereby driving competition• Informed decision making when selecting a service provider	
	Key Metrics <ul style="list-style-type: none">• Better policies• Improved speeds• Access to performance data from regulators and service providers	User Profiles Target audience and early adopters <ul style="list-style-type: none">• Researchers• End-users• Regulators• Internet Service Providers	User Channels <ul style="list-style-type: none">• Word of mouth to those already involved in similar projects• I* conferences/workshops in the region
Resources Required Dedicated remote server (4GB RAM, 100GB storage or higher), registered domain & website/portal, data visualisation tools		Contributor Profiles Contribution types and ideal contributors Anyone interested in Internet access and measurements, data analysts, web developers, system/network engineers	Contributor Channels <ul style="list-style-type: none">• I* conferences/workshops in the region• Publicise available research
